

# Carbon Basics for Livestock Producers

Macarthur

**Suffoir Winery, 144 Mt Eccles Rd, Macarthur**  
**16<sup>th</sup> February 2026, 4:00 – 6:30pm**

Livestock producers are increasingly hearing about emissions, sustainability and market expectations, but it can be difficult to separate what matters now from what may matter later.

**This FREE workshop will cover:**

- Understanding livestock emissions
- How emissions and sustainability fit into supply chains
- What processors, customers and financiers may ask next
- Practical actions already reducing emissions intensity
- A demonstration of emissions tools to support understanding and awareness

**This hands-on workshop, run with Southern Farming Systems, helps livestock producers understand their emissions and what this means for market access, supply chains and future business decisions.**

**It's not about compliance or carbon trading—it's about building confidence and knowing how to make informed, practical choices for your business**

**This free event is suitable for sheep, beef and mixed broadacre and livestock producers.**  
**Catering will be provided and registration is essential**
